

Online Metal Building Design & Estimate

Metal Building Outlet is a combination of applications to design, price and estimate the entire steel building projects. The system tracks quotes from inception until they become jobs. System also creates own table of estimators and track their progress. Generate reports for quotes not completed, quotes completed, and by date range. The application includes design your building, building specials, accessory prices, insulation price, mini storage, aircraft hangers, foundation design and erection quote. The manufacturer has the ability to define multiple user types: builders, direct sales, and brokers are a few. Discounts and markups may be defined for individuals, user types and additional factors may be added for job weights. Brokers are allowed to have their own web site while complete control of the pricing philosophy and maintenance stay with the manufacturer.

Quotation and pricing reports and preliminary framing drawings including anchor bolt plans with reactions and details are available for the user. A great time savings for the manufacturer's estimating and engineering resources.

Metal Building Accessories is a B2C website for obtaining product specifications and/or pricing for accessories used in metal building projects. It serves as a discount outlet for a variety of only name brand manufacturers and their products which are commonly used in the commercial metal building industry. New pricing feature simplifies the estimating/purchasing process.

Overall Business Benefits:

- Increases your customer base - you're no longer limited to a single geographical area, and you're open for business all day, every day.
- Makes administration easy - change prices and add products quickly and effortlessly
- Easy to deploy
- Improves customer service, customers can easily order even the most complex products
- Quick and reliable order processing - auto generation of printable purchase order
- Reduce cost and time - no need for dedicated resource to maintain work orders, make reports and customer service

Overall Customer Benefits:

- Customers can order from anywhere (sitting at home) and need not travel to your place to purchase a product
- Purchases can be reviewed by customers so that they can track and monitor the status of their orders. Information regarding processing and shipping sent via email to customer whenever the status of one of their purchases changes

- Customers can view the status of each order. The software provides the customer with detailed information regarding their order, including whether their order is pending or delivered.
- Customers have access to their full history of purchases allowing them to track back through their past purchases.
- Customers receive email notification of product updates relevant to them

Mini-Storage Outlet is a single source supplier and service center for manufactured products used in the self-storage building industry. Standard designs are offered via the web, and the site is used nationally as a builder support for estimating mini-storage building projects. Mini Storage Outlet allows the builder, architect, or do it yourselfer to configure, instantly price, and receive design drawings online in a matter of minutes.

Metal Building Insulation's online software allows professional contractors, architects and do-it yourselfers to instantly configure, price, and order metal building insulation in a matter of minutes. Due to volume pre-purchasing, the automated online pricing and ordering system lowers overhead, and hence customer can have huge savings. It cuts down the ongoing energy costs. It offers the consumer an opportunity to upgrade the insulation package, further reduce your energy costs, and decrease the payback period by several years.

Certain Features of "Online Engineering Design Solution":

- Metal Building Design with Specification
- Insulation Estimation
- Multiple Vendor Product Display
- Quote Management
- Payment Gateway
- Order Tracking
- Cross Selling Approach
